Scanner-Software for X-Ray Images

As a variant of the professional scanner software SilverFast Ai Studio 8, SilverFast X-Ray 8 has been specifically designed for digitizing medical x-ray film. X-Ray images of bones, teeth, heart, lungs and other parts of the human body are scanned reliably and fast using SilverFast X-Ray 8.

The high-quality digital x-ray film copies are ideal for archiving and for illustration in patient meetings.
Just a few scanners are really suitable for digitizing x-ray film. From a medical standpoint, achieving a maximum color depth and detail in the scans is of extreme importance. Therefore, there are especially high quality demands on the transparency unit, which are optimally met by the current Epson flatbed scanners.

SilverFast X-Ray 8 has been developed in cooperation with the Institute for Media and Photo Technology (Special area: Radiological Imaging in Medicine and Technology and Photo Technology) of the University of Applied Science Cologne. SilverFast X-Ray complies with the DICOM standards regarding storage format for digital x-ray images.

Supported Epson Scanners

LaserSoft Imaging offers SilverFast X-Ray 8 as a specially adapted software for the following current Epson scanners:

- Epson Expression 12000XL Pro
- Epson Perfection V800 Photo
- Epson Perfection V850 Pro

Easy Handling: The WorkflowPilot guides the user through his scanning process
